

# Effect of Biozyme Crop+ on Sunflower

## Key Results

	<i>Treated Control</i>	
<i>Year 1993-94</i>		
Seed yield (q/ha)	21	17
Oil content (%)	41.9	41.5
<i>Year 1994-95</i>		
Seed yield (q/ha)	22.3	16.7
Oil content (%)	41.9	40.6

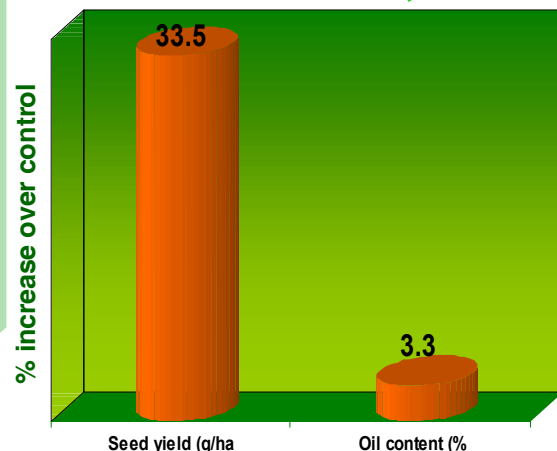

## PROTOCOL

Crop	: Sunflower
Institute	: GB Pant Uni., Pant Nagar, UP, India
Product	: BiozymeCrop +
Applications	: Two - I - @ 225ml/ha before bud initiation II - @ 225 ml/ha 15 days after first spray

## Conclusion

Trials conducted during 1993-94 and 1994-95, the increase in grain yield due to Biozyme application was 28.5 per cent over control (no Biozyme, other practices are same). It gave an additional income of Rs. 7050/- per ha. No phytotoxic symptoms were observed on the plants.
